DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. 5,648,433 (Scott) or U.S. 6,114,472 (Matsuki et al) each in view of EP 1199333 and further in view of U.S. 5,747,560 (Christiani et al) as per reasons of record.

Response to Arguments

3. Applicant's arguments filed June 17, 2005 have been fully considered but are not found persuasive.

Scott and Matsuki et al each disclose blends comprising polyetherimides and polyesters. Each reference discloses that (inorganic) fillers, e.g., clay, and other additives can be further incorporated into their transparent blends (Scott at column 7, lines 9-12 and Matsuki et al at column 9, lines 47-57). The references differ in essence from the present claims in not expressly disclosing a swellable lamellar silicate as the inorganic filler. Swellable layered silicates, such as intercalated clays, are well known fillers for polymer compositions comprising, for example, polyesters, such as poly(ethylene 1,5-naphthalate), and polyetherimides, and blends of said polymers (Christiani et al column 17, lines 25, 35 and 66). Accordingly, it would have been obvious to one having ordinary skill in the art to use clay in the form of a swellable-layered

Art Unit: 1711

material as the inorganic filler material in the compositions of Scott and Matsuki et al because of its known use and compatibility with said polyetherimides and polyesters, as per Christiani et al. It is maintained that said swellable clay materials are generically encompassed by Scott and Matsuki et al's general disclosures of fillers and clays. Accordingly, absent evidence of unusual or unexpected results, no patentability can be seen in the presently claimed invention.

Conclusion.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

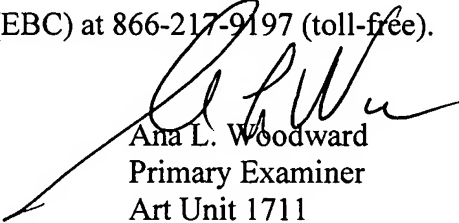

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
